Hi Gagne,

I'm having an interview now, i will call you back as soon as the interview done.

Regards,

Tammy nguyen

**Subject:** RE: Proposed claim amendment, Serial No. 09/576,038; P8193

Thanks for the explanation. However, I am still at a loss to understand why

you think that claim 32, as amended, does not satisfy this test. Could you please call me to discuss?

Thanks.

Chris

**Subject:** RE: Proposed claim amendment, Serial No. 09/576,038; P8193

This is 101 method claim

Claim 32 fails the machine-or-transformation test which is a two-branched inquiry. It may be shown that a process claim satisfies 35 USC § 101 by showing that a claim is tied to a particular machine or by showing that a claim transforms an article into a different state or thing. See *Gottschalk v. Benson*, 409 U.S. 63, 67 (1972). As to the first prong (machine), the Examiner cannot find any showing that these claims are attached to a specific machine. As to the second prong (transformation), the process

claims do not transform a physical article into a different state or thing. The process claims are merely manipulating abstract data without regard to any physical article or object.

**Importance:** High

Dear Examiner Nguyen:

Further to my last message, I just noticed a typo in the proposed claim language. It should read as below (with "separate" being "separated"):

32. (Currently amended) A method comprising:

if an amount of data located in a first memory buffer in a local system associated with a remote direct memory access (RDMA) request does not exceed a maximum transfer size for a single memory to memory transfer operation over a data network to a remote memory buffer in a remote system:

associating the data with a first transfer operation over the data network to the remote memory buffer in the remote system; and

if the amount of data associated with the first transfer operation has not reached the maximum transfer size, associating a portion of the data otherwise to be associated with a subsequent transfer operation for the RDMA request with the first transfer operation instead of with the subsequent transfer operation, the portion of the data being located in one or more portions of one or more other memory buffers in the local system, the subsequent transfer operation being over the data network to the remote memory buffer in the remote system, the local system and the remote system being physically separated from each other; and

---

if the amount of data located in the first memory buffer exceeds the maximum transfer size:

associating a portion of the data with the first transfer operation;  
and  
associating one or more subsequent portions of the data with one or more subsequent transfer operations.

**Subject:** Proposed claim amendment, Serial No. 09/576,038; P8193  
**Importance:** High

Dear Examiner Nguyen:

As you requested, below please find proposed claim language for independent claim 32. Please let me know whether this is acceptable. Support for the language changes may be found in claim 37 (which would be cancelled), and page 6, lines 1-6 of the Specification. Assuming that it is acceptable, similar changes may be made to the other independent claims.

32. (Currently amended) A method comprising:  
if an amount of data located in a first memory buffer in a local system associated with a remote direct memory access (RDMA) request does not exceed a maximum transfer size for a single memory to memory transfer operation over a data network to a remote memory buffer in a remote system:

associating the data with a first transfer operation over the data network to the remote memory buffer in the remote system; and

if the amount of data associated with the first transfer operation has not reached the maximum transfer size, associating a portion of the data otherwise to be associated with a subsequent transfer operation for the RDMA request with the first transfer operation instead of with the subsequent transfer operation, the portion of the data being located in one or more portions of one or more other memory buffers in the local system, the subsequent transfer operation being over the data network to the remote memory buffer in the remote system, the local system and the remote system being physically separate from each other; and if the amount of data located in the first memory buffer exceeds the maximum transfer size:

associating a portion of the data with the first transfer operation;

and

associating one or more subsequent portions of the data with one or more subsequent transfer operations.

**To:** Nguyen, Tammy T. (AU 2144)  
**Subject:** RE: Proposed claim amendment, Serial No. 09/576,038; P8193

Thanks, Examiner Nguyen.

I would propose the following minor changes to the preamble language in that you propose for claim 48:

"Computer-readable storage medium including includes program codes/instructions to be executed by a computer processor for performing the steps following:"

**To:** Nguyen, Tammy T. (AU 2144)  
**Subject:** RE: Proposed claim amendment, Serial No. 09/576,038; P8193  
**Importance:** High

Dear Examiner Nguyen:

As per your request, please confirm acceptability (please note that claim 53 would be cancelled):

48. (Currently amended) Computer-readable storage medium includes program codes/ instructions executed by a computer processor for performing the steps following[[ memory having instructions ~~An article comprising a machine-readable medium having machine-accessible instructions~~, the instructions when executed by a machine result in operations comprising the following ]]:

if an amount of data located in a first memory buffer in a local computer system associated with a remote direct memory access (RDMA) request does not exceed a maximum transfer size for a single memory to memory transfer operation over a data network to a remote memory buffer in a remote computer system:

associating the data with a first transfer operation over the data network to the remote memory buffer in the remote system; and

if the amount of data associated with the first transfer operation has not reached the maximum transfer size, associating a portion of the data otherwise to be associated with a subsequent transfer operation for the RDMA request with the first transfer operation instead of with the subsequent transfer operation, the portion of the data being located in one or more portions of one or more other memory buffers in the local system, the subsequent transfer operation being over the data network to the remote memory buffer in the remote system; and

if the amount of data located in the first memory buffer exceeds the maximum transfer size:  
associating a portion of the data with the first transfer operation; and  
associating one or more subsequent portions of data located in the first  
memory buffer with a corresponding number of one or more subsequent transfer  
operations.

Thanks.

Chris
